

ASD Reading is a groundbreaking online reading & writing program
for children with Autism Spectrum Disorder (ASD).

"ASD Reading is a daily necessity in my special education classroom. The program is incredibly effective and enables students to learn the full range of reading skills. Thank you!" -- Jay Cowan, teacher

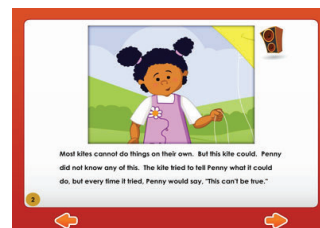

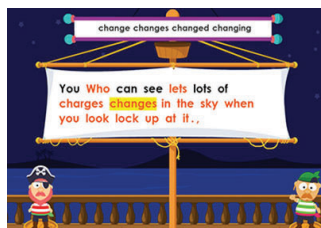

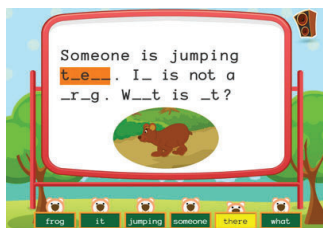

"ASD Reading is a monumental work that makes available to educators a simple, straightforward and time-tested approach."
-- Dr. Jeffrey Lieberman, Columbia University

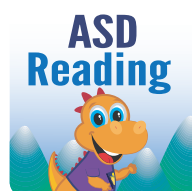

"ASD Reading is a tour-de-force. The program's unique and innovative system is enormously useful to parents and teachers."
-- Dr. Susan A. Rose, Albert Einstein College Of Medicine

ASD Reading is a patented, research-based method for teaching children with Autism Spectrum Disorder (ASD) to read, write and comprehend. Current reading education relies on methods that do not work for most children on the spectrum with the result that the majority never gain the ability to read with fluency or understanding. However, the innovative content and methods of ASD Reading enable children to achieve success - even when they are non-verbal (i.e., non-speaking).

ASD Reading offers unique instruction methods not found in other programs:

- It requires no prerequisite skills - all children can use the program - even those who are non-verbal.
- It uses graphics, audio and animation extensively to reinforce meaning.
- It links written and spoken language so that one mirrors and reinforces the other.
- It provides customized instruction that adapts to each child's specific skills and needs.
- It systematically assesses a child's skills and overcomes error patterns and difficulties.
