

## How to change the response time in ASD Reading

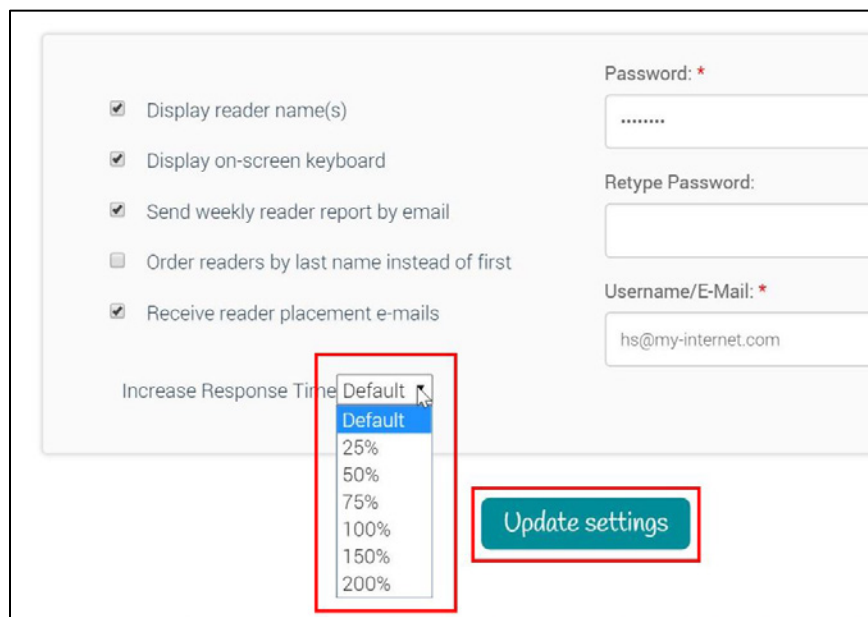

ASD Reading has a default response time. However, you can change this in your settings.

There are 2 ways to change the response time setting.

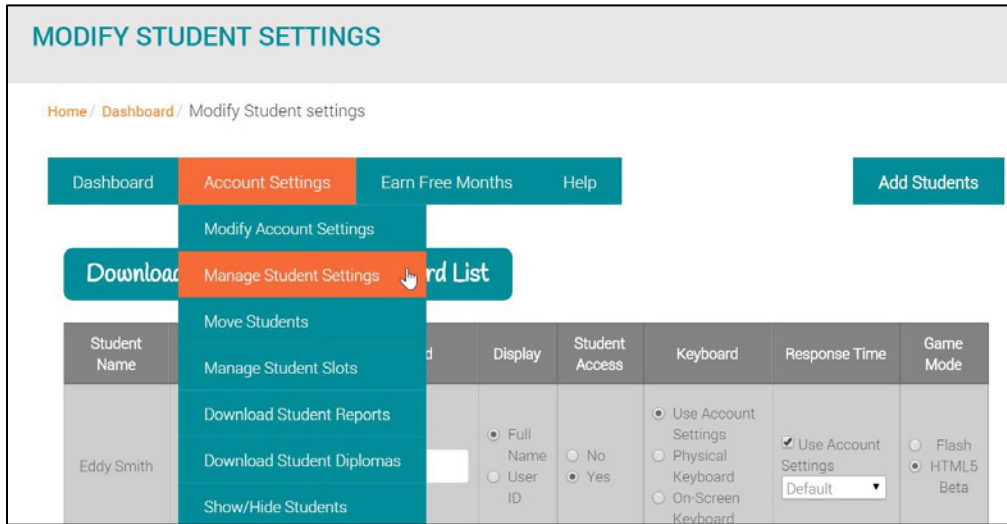

The first method changes the setting for all students in an account. To do this from the dashboard menu (the blue bar at the top) select Account Settings > Modify Account Settings.

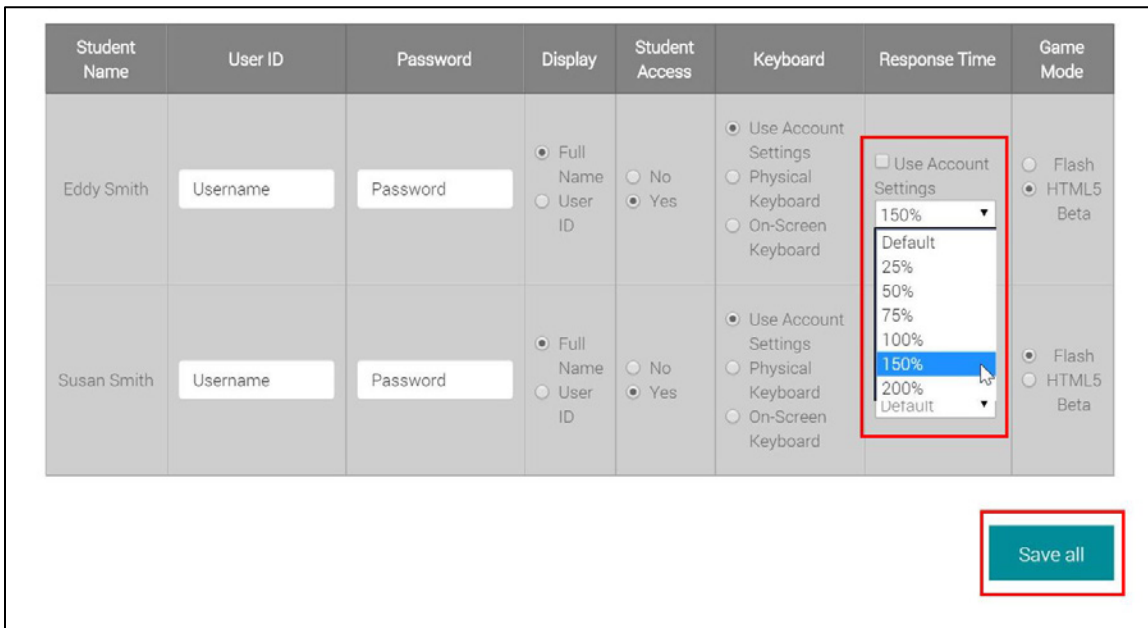

Then scroll down the page to the bottom where you will see the option to “Increase Response Time.” Choose one of the default settings from the drop-down list. The larger the number, the greater the increase. Once you are done, click the “Update settings” button.

You can also change the response time setting for each student in an account individually. To do this click on Account Settings > Manage Student Settings

Then, in each student’s listing there is a “Response Time” column where you can change the response time value by unchecking the “Use Account Settings” checkbox and then selecting a value from the drop-down list. Once you have finished making your changes, remember to click “Save all” to save your settings.
